

## How to access your EyeSpy247 IP camera on your mobile

1) Fire up your mobile's web browser and go to [eyespy247.com/mob](http://eyespy247.com/mob)

### Mobile Access PIN

Use the PIN shown on the right to quickly access your account.

[generate new pin](#)

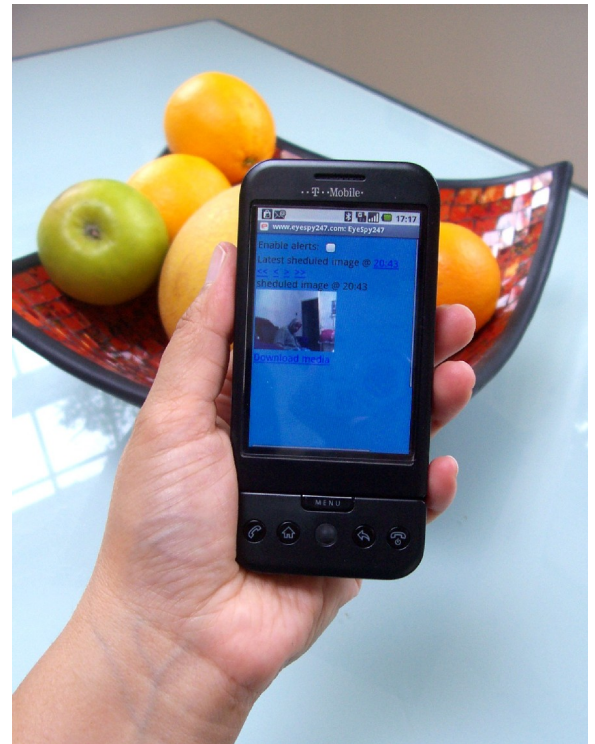

Allow mobile access:

The last mobile login was on Wed 16 Dec 2009 at 10:41.

2) Enter your **Mobile Access PIN**, which you'll find in the **My Account** section of your EyeSpy247 portal.

3) If you've scheduled any regular image recordings the latest will be displayed here.

Same for any motion detection images, whenever enable it.

4) If your mobile phone or PDA supports 3GPP streaming you'll be able to view Live video by clicking the **camera label** (or *MAC address link if you've not changed it to something more memorable*).

Many mobile web browsers can't play 3GPP video streams very well, if at all, and for this we provide you our unique **LiveSnap** function which when clicked will grab and display a real-time snapshot from your camera. ...In the words of all good shampoo bottles, 'repeat as necessary'.
